A URL like https://docs.netgate.com/pfsense/en/latest/book/services/dynamic-dns-chceckip.html for the book would be great.

That link appears to have a typo. Instead of

<https://docs.netgate.com/pfsense/en/latest/book/services/dynamic-dns-chceckip.html>

should it be

<https://docs.netgate.com/pfsense/en/latest/book/services/dynamic-dns-checkip.html>

There is a typo in the URL but even spelled correctly, the target page doesn't exist yet. This issue is to create the URL.

The URL with the typo is in help.php, though, and since it doesn't exist anyhow, for now I'm pointing it to the [other doc](#) which does exist.
