Category:	Dynamic DNS	Estimated time:	1.00 hour
Target version:	2.5.0	Affected Architecture:	
Affected Version:			

Description

When using Hover as a DNS NS, in pfSense the updates are not working, no matter what you write into the hostname/domain. This bug ticket was created to administer the fix.

The proposed fix also solves the issue where there are multiple entries in hover with the same host + domain combination, but different type (like CNAME, MX) - in these cases if the CNAME or MX preceded the A type, then that type would've been updated. The proposed fix always updates A-type DNS entries. This could be further enhanced to also provide the ability to choose / input what type would the user wish to update, like in the domain field A:domain.com or similar, then enhancing the back-end to process the data as such. For this use-case it was enough to only focus on A-type DNS updates.

#2 - 02/10/2020 07:48 AM - Jim Pingle

- Status changed from New to Pull Request Review

- Target version set to 2.5.0

#3 - 02/13/2020 01:47 PM - Renato Botelho

- Assignee changed from Tibor Bacsi to Renato Botelho

- % Done changed from 0 to 100

PR has been merged. Thanks!
