

pfSense - Bug #10784

HA-sync with ssh keys

07/24/2020 05:10 AM - Mark De Souza

Status:	Feedback	Start date:	07/24/2020
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	High Availability	Estimated time:	0.00 hour
Target version:		Affected Architecture:	amd64
Affected Version:	2.4.5		

Description

I have two pfsense boxes configured in HA sync. Synchronisation is performed by a seperate user named "ha-sync" with "System - HA node sync" permissions.

Attempting to log into the primary node with username "mark" and a ssh key, the login works correctly.

When I attempt to log into the secondary node, the attempt fails.

Logging in with a password, I can see that the ~/.ssh directory is owned by ha-sync/nobody and not mark/nobody like on the primary server.

Running: "chown -R mark .ssh" as root resolves the issue

History

- Status changed from New to Feedback

Unable to reproduce it on 2.4.5-p1 and 2.5.0.a.20200728.1850 HA clusters, ~/.ssh directory owner is OK
