Target version:			

Description

It may be nice to allow the similar separator functionality from the firewall rules page, on the status_dhcp_leases.php page for showing visible ranges for static mapped dhcp leases. I have been building my own static ranges, and having to remember them is less than ideal, and would be nice if the seperator could be used to segment the static list I have been building.

Apologies if this is not the place for feature request suggestions.

History

#1 - 07/31/2020 10:30 AM - Jim Pingle

- Category set to DHCP (IPv4)

- Priority changed from Normal to Very Low
