#### Description

ifconfig take group name with less than 15 characters, but in the file interfaces\_groups\_edit.php, we can find the following line:

```
if (strlen($_POST['ifname']) > 16) {
```

which is incorrect, so if, in the interface, we put a name with 16 characters, pfsense would be OK, while ifconfig is call with a wrong name length and it will not take effect.
