Feedback:			
The information on this page is probably accurate but directing the user to a troubleshooting section might be helpful. In my case, I am new to pfsense, just received my sg1100, and the available packages section is blank. I've seen a few references to this online but haven't found anything that seems to point to how to fix it (other than one reference that a package repo was being updated and to wait, but I've had this issue a couple days now). Thanks.

- Status changed from New to Resolved

I updated the general package info on <https://docs.netgate.com/pfsense/en/latest/packages/index.html> and <https://docs.netgate.com/pfsense/en/latest/packages/manager.html>, added xrefs to the troubleshooting pages and other related things. That may be sufficient to cover these cases.
