Release Notes:	Default	Architecture:	

Description

Invalid argument supplied for foreach() in /etc/inc/util.inc on line 2640 error at boot.

Has started happening about 1 week ago (I update nightly to the latest snapshots). This is on an SG-5100 but I do not see this option under "Affected Architecture" in the dropdown for creating an issue.

Fix #10925: Check if \$rtable is empty

History

#1 - 09/22/2020 08:57 AM - Jim Pingle

- Category set to Routing
- Assignee set to Renato Botelho
- Target version set to 2.5.0
- Affected Version changed from 2.5.x to 2.5.0

That's line 2640 on factory and line 2624 on CE.

The foreach() here:

```
$rtable = route_table();

$result = array();
foreach ($rtable[$family] as $item) {
    if ($item['destination'] == $target) {
        $result[] = $item;
    }
}
```

\$rtable is always an array coming out of route_table() but it could be empty, so needs a validity test before foreach().

Great, thank you! If the status is Feedback I assume this has not yet been pushed to the regular snapshots? I've just done the most recent snapshot update and the error did not occur (yet) however it seems to be somewhat random.

It's on recent snapshots. Ticket is in feedback state so we can hear from you if the fix worked. Based on what you said I understand it did so I'm closing the ticket.

If you see the problem yet please let us know and ticket can be re-opened. Thanks
