#### Description

**Page:** <https://docs.netgate.com/pfsense/en/latest/services/dns/resolver.html>

#### Feedback:

Affected: 2.4.5-RELEASE-p1

1. Docs: missing info for "Python Module" option.
2. GUI: "Use SSL/TLS for outgoing DNS Queries to Forwarding Servers" has no title, like for example the entry below, which has a "DHCP Registration" title.
3. GUI: ambiguous wording for "Use SSL/TLS for outgoing DNS Queries to Forwarding Servers" - does this work at all when forwarding is off, as in, the firewall sends the DNS requests from itself and from internal networks to the servers set in General Settings, over TLS on port 853? Need explicit yes/no.
4. Docs: missing info for "Use SSL/TLS for outgoing DNS Queries to Forwarding Servers" option.

#### History

#1 - 12/21/2020 09:11 AM - Jim Pingle

That doc is due for an update in general. The SSL/TLS options already have an issue requesting an update ([#9373](#))
