Feedback:			
<p>This doc seems to say to add an "OPT" interface, but i had to add a virtual IP. It's also specific to PPPoE WANs, it seems? So perhaps I had the wrong Recipe... but if so, a link to the right one (non-PPPoE -- in my case a MOFI4500 in bridge mode) would be nice. If I didn't have the wrong doc, it would be nice to add a comment/procedure to use a Virtual IP for non-PPPoE situations.</p>
