Description

<https://forum.netgate.com/topic/94878/squid-reverse-proxy-multiple-ssl-certificates>:

I recently have installes some webservices which I want to access over wan through a https connection. I've set up a squid3 reverse proxy at the moment which is workind fine so far. It looks like this:

```
domain1 ----->IP 1-----> port 443 -----> service1  
domain2----->IP 1-----> port 443----->service2
```

Service 1 gets the ssl certificate from pfsense and works perfect. Service 2 gets the same cert, but is not working correct because of a different domain.

Is it possible to assign a certificate to specific routes e.g assign cert 1 to the ip from service 1 and cert 2 to the ip of service 2.
