

pfSense - Bug #11254

Some OpenVPN configuration files remain after deleting an instance

01/16/2021 10:09 AM - Viktor Gurov

Status:	Resolved	Start date:	01/16/2021
Priority:	Normal	Due date:	
Assignee:	Viktor Gurov	% Done:	0%
Category:	OpenVPN	Estimated time:	0.00 hour
Target version:	2.5.0	Release Notes:	Default
Affected Version:	2.5.0		
Affected Architecture:			

Description

If you delete OpenVPN Server/Client in the WebGUI, no all config files/directories will be deleted:

```
/var/etc/openvpn/client3/  
/var/etc/openvpn/client3/ca  
/var/etc/openvpn/client3/ca/791c09ae.0  
/var/etc/openvpn/client3/csc  
/var/etc/openvpn/server3/  
/var/etc/openvpn/server3/ca  
/var/etc/openvpn/server3/ca/791c09ae.0  
/var/etc/openvpn/server3/csc
```

sometime for some reason it shows PHP error:

```
[04-Feb-2021 13:01:43 Europe/Moscow] PHP Warning: rmdir(/var/etc/openvpn/server1): Directory not empty in /etc/inc/pfsense-utils.inc on line 1017
```

In the February 4 image of 2.5, I can no longer get the PHP crash after deleting the server/client instance of OpenVPN.

I still have directories the following directories in /var/etc/openvpn:

```
/var/etc/openvpn/server1  
/var/etc/openvpn/server1/csc  
/var/etc/openvpn/client2  
/var/etc/openvpn/client2/csc
```

These are empty directories which will stay until the firewall is rebooted. Following a reboot, /var/etc/openvpn is completely empty.

If that is the expected behavior, then this can be resolved. I have not been able to reproduce the PHP crash since upgrading to the February 4 image.
