Description

The installer ISO is not functioning on the latest 2.5.0 snapshots. More information in the forum thread at <https://forum.netgate.com/topic/160469/2-5-0-nightly-iso-install-broken>

Reports indicate that attempting to accept the license restarts the installer and the user can't progress past the license screen.

Also the name of the ISO file has changed from being named pfSense-CE-<blah>.iso to pfSense-CE-iso-<blah>.img, but upon renaming the .img file to .iso it can still be used as an ISO.

Assigning to Luiz since he is looking into the name change part first.

History

#1 - 02/02/2021 01:18 PM - Manuel Piovan

i can barely see, when i press enter,

```
/etc/rc.local: bsinstall: not found
```

latest iso is only 175MB

Seeing the same on the memstick installer (unable to go past the license screen)

Fixed

#4 - 02/03/2021 11:58 AM - Danilo Zrenjanin

Tested on the latest release (pfSense-CE-2.5.0-DEVELOPMENT-amd64-latest.iso)

I still can't pass the Copyright and distribution notice. Please check.

[Jim Pingle](#) Do you get the same behavior with the memstick?

yes. i am using memstick, it still can't work.

only the version work. pfSense-CE-memstick-2.5.0-DEVELOPMENT-amd64-20210126-2350.img

I've tested pfSense-CE-2.5.0-DEVELOPMENT-amd64-20210203-2250.iso and it worked.

Adding another data point, the latest snapshot installs as expected.
