

pfSense - Bug #11730

Improve visibility of option selections in dark themes

03/25/2021 09:38 PM - Marcos Mendoza

Status:	New	Start date:	03/25/2021
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Web Interface	Estimated time:	0.00 hour
Target version:		Affected Version:	2.5.0
Plus Target Version:		Affected Architecture:	
Release Notes:	Default		

Description

The following applies to Chromium browsers, but not Firefox, when the browser/OS theme is set to dark.

Selected items in option boxes are gray and blend in with lighter gray option box backgrounds. See attached ``option-background-current.png``.

The highlighted color seems to be inherited from the browser's user agent stylesheet. See attached ``option-background-css.png``.

I could not find a way to override the gray highlight that the browser applies. However, the background of the option box can be overwritten with ``.form-control { background-color: #fff !important; }`` which is already set by the ``bootstrap.min.css`` but not applied. See ``option-background-white.png``.
