Description

Some discussion on reddit with Jim Thompson eluded to the possibility of wrapping up WireGuard as an addon package for pfSense...I assume at least until it is formally accepted into the kernel as a first-class citizen. The wireguard-kmod and wireguard-tools-lite (both part of the wireguard meta port) are available in the latest ports tree mirrored from the upstream wireguard project code. Because WireGuard will likely remain an external kmod for some time, can we begin a discussion on what it would take to wrap wireguard up as a package, and a plan of maintenance moving forward? Just a thought.
