Description it seems since I switched to using rc1 when PFSense is rebooted I have to ssh in and then restart the web configurator. Then the web interface comes up. Am I missing something? 2.0-RC1 (i386) built on Wed May 4 15:04:09 EDT 2011

That is definitely not normal, but there is not enough information here to reach any kind of conclusion. Please post on the forum and give a lot more detail to help determine what the issue is.

when RC1 boots the web interface does not come up (at least here).
Once I see the LCD display come alive I then have to ssh into the box and do a restart webconfigurator from the menu. Then I can access it from a browser.
