**Description**

See [https://forum.netgate.com/topic/197620/squid-undefined-symbol-\\_ztvnst3\\_\\_117bad\\_function\\_callE-after-upgrade-to-2-8](https://forum.netgate.com/topic/197620/squid-undefined-symbol-_ztvnst3__117bad_function_callE-after-upgrade-to-2-8)  
Current work around

uninstall squid package before updating to pfsense 2.8.0,  
update pfsense + reboot  
mv /usr/lib/libc++.so.1 /root  
install squid

History

#1 - 06/14/2025 02:38 AM - dylan mendez

Please note Squid is deprecated from pfSense.

- Status changed from New to Rejected

#3 - 06/24/2025 08:58 AM - Bernhard Schmidt

So it's still installable, not mentioned in the release notes of 2.7.1, 2.7.2 and 2.8.0, but just fails to start. Most likely it could be fixed easily. Is it really not possible to get this fixed?

AFAIK there is no other forward proxy available with that featureset.
