Target version:		Affected Architecture:	i386
Affected Version:			

Description

Hi,

I installed the squidguard module. In SERVICE -> PROXY FILTER -> GROUP ACL, I created an ACL and when I try to use an username in the "Client (source)" I receive this messages:

The following input errors were detected:

- SRC 'Limitados': Item 'user1' is not a ip address or a domain or a 'username'.

If I use an IP address or a domain name no problems, but with username dont work. I already created the username on the LOCAL USER tab on the SERVICES -> PROXY SERVER.

Anybody help me?

History

#1 - 07/04/2011 12:31 AM - Chris Buechler

- Project changed from pfSense to pfSense Packages

- Target version deleted (2.0)

#2 - 07/04/2011 12:32 AM - Chris Buechler

- Category set to squidguard

I'm not sure that's a bug, you should post to the forum for help.

#3 - 07/04/2011 05:52 AM - Mukesh Patel

its not a bug, please try with single or double coat i.e "mpatel" or 'mpatel'

Yes, the user name define in quotes.

Carefully read the description of the fields
