Description

The pfsense image in the top left corner which takes the user back to the index.php page has its url dynamically created. This results in broken links if the user tries to click the image from a directory other than the top level.

e.g from the following urls, the image's link becomes <https://pfsense-host/squidGuard/index.php>, which returns a 404.

https://pfsense-host/squidGuard/squidguard_blacklist.php

https://pfsense-host/squidGuard/squidguard_log.php
