

## pfSense - Bug #1738

### Restore fails when username in backup is not matching

08/03/2011 01:00 AM - Louis-David Perron

<b>Status:</b>	New	<b>Start date:</b>	08/03/2011
<b>Priority:</b>	Very Low	<b>Due date:</b>	
<b>Assignee:</b>		<b>% Done:</b>	0%
<b>Category:</b>	Backup / Restore	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Affected Architecture:</b>	
<b>Affected Version:</b>	2.0		

#### Description

It's not likely that it will happen to anyone, but the consequences are quite time consuming.

When on the default configuration of today's snapshot, if I import a backup that is using something else as "admin" for web user, then it's almost impossible to properly restore the backup.

After the config upload, my browser gets redirected to interfaces\_assign.php, but it mentions:  
No page assigned to this user! Click here to logout.

If I click logout and then I login into the new user, I get to the install package screen, even if the interfaces are still in the same state as before the restore.

#### History

##### #1 - 04/17/2012 06:24 AM - saye saye

I do not know why this big issue has such a low priority?  
Some bugs prevent us from reliably doing things and trust the device.

So I suggest to increase the priority and fix it in the next release. It probably will get resolved very easily.

Thank you.

##### #2 - 04/17/2012 06:26 AM - saye saye

Besides It affects to version 2.0.1 also.

##### #3 - 09/16/2013 09:52 AM - Louis-David Perron

This exact bug is still present in 2.1.
