Target version:	2.0	Affected Architecture:	
Affected Version:	2.0		

Description

In 2.0 (25/11/2009 snapshot) carp sync failover is broken . Unable to synchronize between 2 firewall .

I make a fresh install on both firewall there no description in the configuration .

message in log .

php: : An error code was received while attempting XMLRPC sync with username admin <http://x.x.x.x:80> - Code 2: Invalid return payload: enable debugging to examine incoming payload

php: : New alert found: An error code was received while attempting XMLRPC sync with username admin <http://x.x.x.x:80> - Code 2: Invalid return payload: enable debugging to examine incoming payload

As i mention its a fresh install an there is no description in any of the interface . i try on 2 server model HP DL380 G5 and G6

When i reboot i have these message in the log (if that help)

```
Nov 26 10:37:55 kernel: bce1: link state changed to DOWN
Nov 26 10:37:56 php: : The command '/usr/sbin/ngctl name carp0: vip134' returned exit code '71', the output was 'ngctl: send msg: No such file or directory'
