Description

Please consider including the FreeBSD VirtIO network driver.

See <http://kdi.nobugware.com/post/2011/10/14/freebsd-90-guest-virtio-support-in-KVM/> for more details and build instructions.

This would greatly improve performance in virtualized environments.

I agree, this would be a very good enhancement. with centos moving completely to kvm as of 6.0 these virtio drivers would be essential for some deployments.
