<b>Release Notes:</b>			
<b>Description</b>			
Hi!			
I'm currently using the last stable 2.0 version of pfSense (release date 13 September). When pfSense is restarted, the OpenVPN server doesn't do NAT and is required do the services restart manually from "Services" menu.			
Hope can be solved in the next release. Thanks in advanced.

- Status changed from New to Feedback
- Target version deleted (2.0.1)

Restarting OpenVPN has no relation to NAT, something else going on there. This probably should be taken to the forum or mailing list for proper troubleshooting, bug reports have to have a specific cause and problem defined and it's nowhere near as simple as described here.
