Release Notes:			**Affected Architecture:**	

Description

My mainboard Asus P5GC-VM has problem run from Kingston 4GB DataTraveler 100. It loops just after boot with umass0: BBB ... TIMEOUT.

It is same/similar like http://gnats.netbsd.org/37884 or http://gnats.netbsd.org/39568, but my mainboard has i945 chipset.

I installed it from pfSense-1.2.3-RELEASE-LiveCD-Installer.iso.gz with SMP kernel.

I have working pfSense (1.2-RELEASE built on Sun Feb 24 17:04:58 EST 2008) on same mainboard on older other 2GB Kinsgton USB flash drive.

- Status changed from New to Rejected

This sounds like a FreeBSD regression. Please ask for help on the forum or mailing list.

#2 - 07/27/2015 11:13 PM - Chris Buechler

- Target version deleted (1.2.3)
