**Description**

2.0-BETA1 built on Sun Jan 3 22:19:08 EST 2010

When I enable captive portal the following shows up in the system log...

Jan 4 10:50:23 php: /services\_captiveportal.php: The command '/usr/local/sbin/lighttpd -f /var/etc/lighty-CaptivePortal.conf' returned exit code '255', the output was '2010-01-04 10:50:23: (network.c.345) can't bind to port: 80 Address already in use'

I *think* this is caused by the new https redirect in /etc/inc/system.inc, lines 1027~1034.

The error does not occur when webConfigurator protocol is set to http.

Thanks

Slam
