Description			
Mentioned in this thread: http://forum.pfsense.org/index.php/topic.65452.0.html In sites with single WAN, I still put a realistic gateway monitoring IP (e.g. Google 8.8.8.8) so I can see what the WAN performance is like. By, like the OP in the thread, I don't want apinger/pfSense to take any action at all based on the monitored stats (latency, loss, even member down).

Feature #3151 Disable gateway monitoring actions

without disabling gateway monitoring.

This allows the user to continue to monitor the gateway with dpinger, so they can see how it is performing, but for the system not to take any real action if the latency/loss exceeds the given limits.

A typical use case for this would be on a single-WAN system. There is no failover option, so there is no point taking any real action when the latency/loss is high. Having stuff try to failover (and stop/start stuff...) is just disruptive.

In this case the user could have disabled monitoring completely, but then they get no feedback about gateway performance.

History

#1 - 12/07/2016 09:42 AM - Phillip Davis

I finally remembered and cared enough :)

Pull Request <https://github.com/pfsense/pfsense/pull/3259>

#2 - 12/07/2016 09:58 AM - Renato Botelho

- Assignee set to Renato Botelho

- Target version changed from Future to 2.4.0

I'll check it

#3 - 12/07/2016 12:10 PM - Renato Botelho

- Status changed from New to Feedback

- % Done changed from 0 to 100

Merged, thanks!

#4 - 12/27/2016 01:52 AM - Phillip Davis

Been working for me, but it would be good to get some feedback from anyone else who has tried/tested this.

#5 - 12/27/2016 10:13 AM - Jim Pingle

- Status changed from Feedback to Resolved

Works here, too. Gateway status shows it going up/down but no actions are taken when it transitions.

#6 - 02/10/2017 10:47 AM - Jim Pingle

- Target version changed from 2.4.0 to 2.3.3
