Target version:	2.2	Affected Architecture:	All
Affected Version:	All		

Description

Hey Guys, It appears Subject Alternative Names are not working in the CA module for pfsense 2.1.

The fault is, the certificate has no "Subject Alternative Name" Attribute, all "SAN" Entries filled into "Subject" field, there is no SAN extension in the certificate.

Fore more Info, have a look to the following Thread in the Forum:

<http://forum.pfsense.org/index.php/topic.68512.0.html>

Best regards,
David Meixner

History

#1 - 01/13/2015 09:56 AM - Jim Pingle

- Status changed from New to Resolved
- Target version set to 2.2
- Affected Version changed from 2.1 to 2.2

Fixed at some point on 2.2. When SANs are added to a cert, they are properly reflected in the properties.
