

pfSense - Bug #3445

Proxy URL behaviour for package list - trailing slash

02/11/2014 08:53 AM - Adrian James

Status:	New	Start date:	02/11/2014
Priority:	Very Low	Due date:	
Assignee:	Renato Botelho	% Done:	0%
Category:	Web Interface	Estimated time:	0.00 hour
Target version:	Future	Affected Architecture:	
Affected Version:	2.1		

Description

In the System -> Advanced -> Miscellaneous settings, where you enter the proxy URL, if you have a trailing slash then the Update will work but not the package list. If you leave the trailing slash off then it works.

i.e.

<http://192.168.1.1/> will work for updates but not packages

<http://192.168.1.1> will work for updates and packages.

This was found in 2.1-RELEASE (amd64)

History

Apparently no longer an issue due to input validation, the field accepts IP or FQDN only, not URL.
