

pfSense - Bug #3920

Backup of CA files broken

10/09/2014 01:34 PM - Greg Harris

Status: Rejected	Start date: 10/09/2014
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	
Affected Version: 2.1.x	Affected Architecture: i386

Description

Using the Backup/Restore feature, CA sections seem to be interrupted in the long lines. See forum post:
<https://forum.pfsense.org/index.php?topic=76969.msg452409#msg452409>

To recreate:
Create certificate files
Download a backup
Restore the backup
After reboot, webgui fails to restart
Reset to factory default
Edit the backup .xml file and remove all <ca> sections
Restore the newly saved backup and everything works beautifully.

- Status changed from New to Rejected

as described isn't true. I added a reply in the linked forum thread as to what appears to be happening here, from people manually editing config files.
