Description

Hello,

It would be great to have a new option to not sync passwords for auth users in config sync settings.

Currently config auth user sync is all or nothing - all info or no info.

By adding an option to not include passwords in the user sync, different passwords could be used on
pfsense master vs. slave.

That way if someone breaks one password on one machine they won't now also have access to the other firewall.

No, would not be great. That would never be a good idea.
