There appears to be a bug in this. The setting is written to the config.xml file but never ends up in ipsec.conf which always reads 'yes'. Tested on 2.2.1-rel 64bit

Hi,

There appears to be a bug with pfSense 2.2.1. Following on from the initial topic:

<https://forum.pfsense.org/index.php?topic=87857.new:topicseen#new>

Specificially:

"

Hi,

pfSense 2.2.1

I've been looking to test out this patch that was applied then came out with pfSense 2.2.1 - but it doesn't appear to set the value! :-)

VPN...IPsec...advanced settings...Configure Unique IDs as.

If I set as "no" and click apply, the value in /var/etc/ipsec/ipsec.conf remains as "uniqueips = yes".

Indeed, if I refresh the page, the NO changes to YES.

Am I doing something incorrect?

=david=

"

It appears that there is a bug in that the setting is not applied or maintained.

Thank you.

=david=

Hi,

Oops, just noticed that this has hopefully fixed with this PR: <https://github.com/pfsense/pfsense/pull/1593>.

Thanks!

=david=
