

pfSense - Bug #4384

missing input validation in captive portal

02/06/2015 10:32 PM - Chris Buechler

Status:	Resolved	Start date:	02/06/2015
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:	Captive Portal	Estimated time:	0.00 hour
Target version:	2.2.1	Affected Version:	All
Plus Target Version:		Affected Architecture:	
Release Notes:	Default		

Description

services_captiveportal.php is missing input validation that allows creating invalid configurations, including ones that can trigger crash reports like:

```
PHP Fatal error: Class 'Auth_RADIUS_' not found in /usr/local/captiveportal/radius_authentication.inc on line 80
```

In that case, RADIUS auth is chosen, but "RADIUS protocol" beneath it left empty and unselected.

Where RADIUS auth is enabled, it must require entry of a RADIUS server IP or hostname for the primary authentication source, and a choice of RADIUS protocol.
