

pfSense - Bug #4492

pfSsh.php help appears to reference an older config structure.

03/06/2015 09:46 AM - Robert Middleswarth

Status:	Resolved	Start date:	03/06/2015
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Developer Tools	Estimated time:	0.00 hour
Target version:	2.2.1	Affected Version:	All
Plus Target Version:		Affected Architecture:	
Release Notes:	Default		

Description

The example give to enable a static internface

```
/* to enable an interface and set a static ip address */
$config['interfaces']['wan']['disabled'] = false;
$config['interfaces']['wan']['ipaddr'] = "192.168.100.1";
$config['interfaces']['wan']['subnet'] = "24";
```

No longer works. It should be

```
/* to enable an interface and set a static ip address */
$config['interfaces']['wan']['enable'] = true;
$config['interfaces']['wan']['ipaddr'] = "192.168.100.1";
$config['interfaces']['wan']['subnet'] = "24";
```

I haven't checked any of the other examples to see if they need updated as well.

Thanks
Robert
