Description

There are a few issues with the setup wizard.

1. Most or all of the text box fields do not have the text offset, so it overlaps with the pencil icon in the box (example in 1.png)
2. The GMT offset zones (GMT+X, GMT-X), which are the opposite of what one would expect from their names, are shown. These are filtered out elsewhere in the web interface, and need to be here as well. (2.png)
3. Lacking input validation -
 - a) the General Setup page doesn't enforce valid hostname, domain, or DNS servers.
 - b) the Time Server Information page doesn't enforce a valid time server hostname
 - c) the Configure WAN interface page doesn't enforce valid MAC, MTU, IP, gateway, hostname, etc.
 - d) the Configure LAN interface page doesn't require a valid IP
