Affected Version:			

Description

I have a little issue with the Traffic Shaping Wizard on my pfSense. I have the following interfaces:

- WAN 1 (VLAN xy on lagg0)
- LAN (lagg1)
- WAN 2 (VLAN xy on lagg0) (OPT)

lagg 0 and lagg1 is a failover between the onboard and the external network card (each))

If I try to use the Wizard to create HFSC traffic shaping, I only see the WAN 1 and WAN 2, but no LAN Interface?

History

#1 - 08/05/2015 06:59 AM - Jim Pingle

- Status changed from New to Not a Bug

LAGG interfaces do not support ALTQ directly, so they don't appear in the shaper wizard or other ALTQ areas unless they are used in some other way that does support ALTQ, such as with VLANs.

For assistance, please post on the forum.
