| The SAN choices when creating a certificate need to use proper backend values to pass validation and work properly:<br><br>"FQDN or Hostname" should store a value of "DNS"<br>"IP address" should store a value of "IP"<br>"URI" should store a value of "URI"<br>"email address" should store a value of "email" |            |                        |            |

#### Associated revisions

##### Revision 3f0efd58 - 09/04/2015 12:26 PM - Steve Beaver

Fixed #5098

Page re-written to use jQuery row add/delete

#### History

##### #1 - 09/04/2015 10:12 AM - Steve Beaver

- Status changed from Confirmed to Assigned

The correct select values are used, but they are not being stored properly because the programmer used the enableDuplication() method, which changes the data format to an array, but did not change the \$\_POST PHP to match.

[#5097](#) has the same cause.

I'll remove that method and use jQuery instead.

##### #2 - 09/04/2015 12:22 PM - Steve Beaver

- Status changed from Assigned to Feedback

- Assignee changed from Steve Beaver to Jim Pingle

Page re-write to use jQuery for row add/delete

##### #3 - 09/04/2015 12:30 PM - Steve Beaver

- % Done changed from 0 to 100

Applied in changeset [pfsense:3f0efd5896c3a57592e4d8f4125418c4cab700eb](#).

##### #4 - 09/04/2015 12:59 PM - Jim Pingle

- Status changed from Feedback to Resolved

- % Done changed from 100 to 0

Works fine now, thanks!
