Description			
<p>It would be a great help to have a search box on the Available Packages tab to filter the packages as you type. The package list is lengthy, but a fixed size, and trying to find a package in the list could be much easier.</p> <p>What I'm thinking is a box near the top of the list that would filter as you type using JS to only show the resulting table rows that match (in the package name, description, etc).</p> <p>If it turns out to be too much trouble it can be dropped.</p>

Works great as far as I can tell. I tried various combinations of keywords and regex for the name, description, and both.
