Target version:	2.3		**Spent time:**	0.00 hour

Description

Go through the setup wizard, set the hostname and timezone, leave rest at defaults. Go back to the dashboard at the end and you'll have a crash report.

```
PHP Errors:
[07-Nov-2015 06:53:46 Etc/UTC] PHP Parse error:  syntax error, unexpected ';' in /usr/local/www/wi
zard.php(156) : eval()'d code on line 3

I'm guessing this is the culprit: (line 3 of the PHP)

```
    <stepsubmitphpaction>
    if($_POST['adminpassword'] != "") {
        if($_POST['adminpassword'] == $_POST['adminpasswordagain']) {
            $admin_user =&amp; getUserEntryByUID(0);
            local_user_set_password($admin_user, $_POST['adminpassword']);
            local_user_set($admin_user);
            write_config();
        } else {
            print_info_box_np("Passwords do not match!  Please press back in your browser window and correct."
);
            die;
        }
    }
    </stepsubmitphpaction>
```

Its the same in 2.2.4 though. Was it always that way?

#2 - 11/07/2015 04:13 PM - Kill Bill

Put that between CDATA.

#3 - 11/07/2015 04:18 PM - Kill Bill

And in general, all that entity crap in that file (like descriptions) would benefit from the same. Completely unreadable.

#4 - 11/07/2015 07:50 PM - Steve Beaver

Sure, but it's interesting that this problem has been in there since RELENG_2.0

#5 - 11/07/2015 08:03 PM - Steve Beaver

php corrected and wrapped in <![CDATA[ ]]>

#6 - 11/07/2015 08:10 PM - Steve Beaver

- % Done changed from 0 to 100

Applied in changeset pfsense:57cadb042dc133f1a3a671f4ff823589760574bf.

#7 - 11/10/2015 11:06 PM - Chris Buechler

- Status changed from Feedback to Resolved

- Affected Version changed from 2.3 to All

Not sure how that never generated a crash report before. Works, thanks!

#8 - 04/01/2016 05:20 AM - Chris Buechler

- Affected Version changed from All to 2.3
