

pfSense Packages - Bug #5703

Update FreeRADIUS to v2.2.9

12/27/2015 07:55 PM - Paul K

Status:	Duplicate	Start date:	12/27/2015
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	FreeRADIUS	Estimated time:	0.00 hour
Target version:		Affected Architecture:	All
Affected Version:			

Description

There is a known issue with FreeRADIUS calculating incorrect MPPE keys when using TLS 1.2. This issue was fixed in v2.2.9. This was not an issue with v2.2.5 since it did not support TLS 1.2.

This is breaking all TLS based EAP types when using wpa_supplicant \geq v2.4. This includes Android 6.0 and iOS 9 beta, before Apple reverted to TLS 1.0.

Sorry for the dupe, I swear I searched, I thought searching under pfSense projects also includes packages, but turns out that is not the case :)
