

pfSense - Bug #5750

unbound.inc should not add 127.0.0.0/8 in forward mode

01/09/2016 08:47 AM - Christopher Schirner

Status:	Resolved	Start date:	01/09/2016

Target version:	2.3	Affected Architecture:	
Affected Version:	2.2.x		

Description

Introduced in the commit [1], the local DNS servers are appended to unbound forward-zone. The function get_dns_servers() returns the parsed content of /etc/resolv.conf which also contains 127.0.0.1. This makes sense if one have a second DNS server running, with unbound running on a different port.

Maybe it makes sense to filter for the private net (127.0.0.0/8) if one want to use forwarding mode
