Description

After each update so far, I've noticed that pfSense is trying to fetch files. This happens right before it actually starts the update. Check screenshot. I can provide more info if necessary.

Thanks.

Revision 93a8ddf7 - 02/01/2016 05:19 AM - Renato Botelho

Fix #5831

After `PKG_AUTOUPDATE=false` was removed, operations done during boot, 2nd and 3rd stages of upgrade process, are trying to update repository metadata. The problem is during this stage we don't have a network available yet and all needed packages were previously downloaded.

Add `-U` parameter to all read/write pkg calls during at these stages to prevent `pkg(8)` to try to update metadata

Revision b69a106a - 02/02/2016 06:38 AM - Renato Botelho

Fix #5831 using a simpler approach, just setting `REPO_AUTOUPDATE=false` when it's booting
