guessing you're on nanobsd? They are retained on full installs, but /var/ is a RAM disk on nano and those aren't among the files that get saved.

Yes it's nanobsd on full installs works fine!

nanobsd is EOL

This is fixed with <https://github.com/pfsense/pfsense/pull/2902> on full installs, and nanobsd is indeed dead.

Safe to close.
