Target version:	2.3.1	Affected Architecture:	
Affected Version:	All		

Description

Crashreporter, should show php warnings, not only their stacktrace.

A php error like reported here <https://forum.pfsense.org/index.php?topic=109447.msg609363#msg609363> where only a stacktrace is shown but the actual error/warning is hidden makes it more difficult to debug.

My preference would be to just show the whole contents of the /tmp/PHP_errors.log file, not filtering out lines that contain the word 'warning'..

History

#1 - 04/09/2016 02:21 PM - Chris Buechler

- Status changed from New to Confirmed
- Target version changed from 2.3 to 2.3.1
- Affected Version changed from 2.3 to All

#2 - 04/15/2016 10:06 PM - Chris Buechler

- Target version deleted (2.3.1)

It needs to completely ignore warnings in release versions ([#6178](#)) as it's a massive amount of useless noise.

For development versions, this would be good.

#3 - 05/05/2016 01:23 AM - Chris Buechler

- Status changed from Confirmed to Resolved
- Target version set to 2.3.1

Issue fixed in 918f0a9469aa05a9300a25c2ca60e2be83411226.

That won't end up doing anything differently in 2.3.1 since PHP warnings aren't being logged there, but good to go for future development versions.
