

pfSense - Bug #6433

"TFTP Server" field on DHCP server page does not allow hyphen character.

06/01/2016 11:23 AM - Justin Sherrill

Status:	Resolved	Start date:	06/01/2016
Priority:	Low	Due date:	
Assignee:	Chris Buechler	% Done:	0%
Category:	Web Interface	Estimated time:	0.00 hour
Target version:	2.3.1-p2	Affected Version:	2.3.x
Plus Target Version:		Affected Architecture:	
Release Notes:	Default		

Description

Entering a host name with a "-" in it gives a generic "Please match the requested format" error, for the "TFTP Server" field on the DHCP Server configuration page. It should be considered a legitimate character.

(Pedantically, maybe it's the "dash" or "endash" or "minus sign" character? Not sure. Same key as the underscore on a US keyboard, though it's probably already clear what it is.)

- Status changed from Feedback to Resolved

fixed

#3 - 07/21/2016 01:55 PM - Shane Poteet

This still does not have the necessary functionality as it did on 2.2.x as of 2.3.1-5. I need to be able to populate this field with a URL and it is still not taking it, well not if I don't edit and import config. example "http://p.phonism.com/m" or "tftp://192.168.210.1" etc. A URL is required for devices such as polycom.
