Description			
<p>good morning people,</p> <p>I'm with a problem in dhcp backup restoration, I will explain the case.</p> <p>My client has 3 branches with pfsense, which is blocked dhcp to distribute automatically registered only use the internet. all three affiliates use the same network bands.</p> <p>then to not get all the time enrolling in the other device by device units, was making a member of a unit made up of static and restored in others, I was using version 2.2 normally after the pfsense update to 2.3.1 this feature stopped working . I'll back up a restore in the other and he says that restores, that is to restart, phaco procedure but is not restored.</p> <p>keeps the same previous configurations.</p>
