#### Description

Please reopen bug [#6433](#). Not familiar with system here or I would try.

The filter on the web interface is not allowing URLs for the DHCP server/ tftp server option.

I need to be able to put URL such as:

```
"http://p.phonism.com/m"  
"tftp://192.168.210.1/a/b/c"  
"ftp://192.168.210.1/a/b"  
etc
```

We use this functionality for polycom phone provisioning.  
Currently I have to edit config manually and import config to change this.

If this is already fixed for a future release then my apologizes.
