<b>Affected Version:</b>	2.3.2		

**Description**

Hi,  
I've just updated a virtual appliance to the new 2.3.2\_1 version, and now, i can't add ppp connection (3G backup )  
I've got a service name mandatory field but it doesn't appear (as in PPPoE mode) and is not mandatory...

Can you help me to find a solution?

Thanks,  
JV

Having the same problem. cannot add any ppp connection because it's saying "The service name contains invalid characters"

#### #3 - 03/16/2017 05:27 AM - Daniel Weeber

Problem is in /usr/local/share/mobile-broadband-provider-info/serviceproviders.xml  
Line 3150 contains (),-

```
<name>T-Mobile(Telekom)</name>
```

If I change that to esp "TMobileTelekom" I can add a device w/o any problem.

#### #4 - 03/16/2017 05:29 AM - Daniel Weeber

Sorry for third answer, just found the service name check

```
/usr/local/www/interfaces_ppps_edit.php  
Line 276
```

```
if ($_POST['provider'] && !is_domain($_POST['provider'])) {
```

is\_domain() is why () is failing in the service-name

Yeah, the input validation makes zero sense, there's no user input there in the first place.

Merged.
