| <b>Description</b>  |                  |                        |            |
| <p>The only way to disable the auto config backup package after the credentials have been entered is to uninstall it. The page won't allow you to remove the credentials.</p> <p>For testing purposes or to prevent timeout delays when there's no WAN connection it's often desirable to temporarily disable ACB but keep the credentials stored.</p> <p>An enable checkbox would accomplish that.</p> |                  |                        |            |

#### History
