#### Description

Simple build process:

Clone from <https://github.com/simplepie/simplepie.git>

run "php build/compile.php" from inside the clone dir

Results in SimplePie.compiled.php which can be placed, along with the LICENSE.txt, in an appropriate location.

The include in www/widgets/widgets/rss.widget.php will need updated to the new path/filename

Currently it resides in /etc/inc/simplepie but it should be in a more hier(7)-friendly location.
