

pfSense - Bug #7110

Empty custom NTP ACL produces syntax error in /var/etc/ntp.conf

Target version:	2.3.3	Affected Architecture:	
Affected Version:	2.3		

Description

On the NTPD ACL tab [Services/NTP/ACLs] the blank default entry under Custom Access Restrictions results in addition of a naked restrict keyword to /var/etc/ntp.conf. This results in a syntax error that is logged during ntpd startup.

```
2017-01-10T17:57:29.426040-08:00 pfsense <ntp.err> ntpd[78938]: line 19 column 0 syntax error, unexpected T_EOC
2017-01-10T17:57:29.426257-08:00 pfsense <ntp.err> ntpd[78938]: syntax error in /var/etc/ntp.conf line 19, column 0
```

ntpd ignores the invalid configuration line and continues to run after logging the error.
