| Description | | | |
| The TTL for host overrides and DHCP leases appears to be using a default value of 3600, it would be useful to be able to specify both a different default (perhaps one for host overrides and another for DHCP leases) and a specific value for individual host overrides. These can then be set in the unbound config as part of the local-data record. | | | |

Any traction on this? Would be very nice to be able to set ttl via gui for unbound overrides vs having to use custom options to set records you want different ttl on.

#2 - 03/06/2018 09:46 AM - JohnPoz _

Nothing? This came up in a thread again someone asking how to modify this.
